| FUNDING AGENCIES | EuropeAid - European Union |
| STARTING DATE | December 2014 |
| IMPLEMENTATION PERIOD | 21 months |
| DESCRIPTION | The project aims to reduce the impact of soil erosions in the area between Haiti and the Dominican Republic, that cause the pauperization of soils and families, besides put further pressure on local resources. Agro-ecological techniques and a more effective management of soil can bring to a reduction in deforestation practices in the area and to a better management of agricultural resources. Supporting local initiatives will promote environmental protection and a socio-economic development. |
| OBJECTIVES | The project's objectives are the reduction of soil erosion in the beneficiaries' areas and the improvement of the management of water resources to reduce pressures on natural resources. A collaborative approach including local authorities will promote a sustainable socioeconomic development. |
| ACTIVITIES | <ul style="list-style-type: none"> • Realization of 10 micro barriers; • Training on agroecological practices; • Protection of agricultural lots; • Reforestation activities; • Training about and activities of grafting; • Programs of environmental education; • Exchanges between the two countries; • Production of a documentary. |
